

For Immediate Release

PATENT ALLOWED IN CHINA FOR P. KAY METAL'S  
MS2's DROSS ELIMINATION TECHNOLOGY

3/16/2009

P. KAY Metal, Inc. announced today that the first of its patents is issuing in China for its breakthrough **MS2®** dross elimination technology.

MS2 has patents pending globally. The Company expects additional patents to be granted soon in a number of other regions.

The President of P. KAY Metal, Inc. and one of the inventors, Larry Kay stated "We are gratified that China has recognized the uniqueness of our process. We trust that the international community of electronic assemblers will honor these patents in China and throughout the world as they are issued globally".

The Company indicated that they will immediately begin notifying those assemblers who may be using the MS2 dross elimination technology of the issuance of the initial patent.
